

SES FILM AND BAG DISPENSER

Description

Southern Engineering Ltd designed and manufactured dispenser for film or bag rolls

Benefits

Film or bag rolls can be held and dispensed direct from the stand, with two different rolls being held.

Operation

The bulk rolls are loaded onto the dispenser from the rear, and threaded through the control rollers, with the end at a convenient height for grasping. A simple pull down lets the bag flow, then a forward motion locks the flow, allowing the bag to be torn off the roll. A brake device stops the roll from over running and dispensing more than required.

Scope of supply

The unit is manufactured from 304 grade stainless steel, and food grade thermoplastics. It is mounted on four adjustable feet, which may be bolted down for permanent installations. The off set in the frame allows for the unit to be fitted behind a table or conveyor.
